NIZAMUDDIN ALI AHMED

SOFTWARE ENGINEER | PRODUCTION SUPPORT & RELIABILITY AUTOMATION

Guwahati, Assam, India | +91 70026 01418 | sallyinfo365@gmail.com

Portfolio: nizamuddin.online | GitHub: NonCoderF | LinkedIn | Medium

PROFESSIONAL SUMMARY

Software Engineer with 6+ years of experience maintaining and troubleshooting production applications, diagnosing performance issues, integrating networked services, and automating engineering workflows. Strong in Kotlin/Java, real-time WebSocket systems, CI/CD, application diagnostics and technical documentation. Interested in reliability engineering, incident response and infrastructure automation.

FEATURED PROJECT | ONGOING

SentinelOps — Infrastructure Reliability & Automated Recovery Platform

Architecture / technology focus: Linux, Docker, Kubernetes, Helm, Apache Kafka, PostgreSQL, Prometheus, Grafana, Python, Bash, PowerShell, GitHub Actions

Independent project in progress: a production-style platform designed to centralize service health monitoring, incident diagnostics and controlled recovery automation.

- **Monitoring design:** collect application and infrastructure metrics, visualize service health, and trigger alerts through Prometheus and Grafana.
- **Incident pipeline design:** use Kafka for asynchronous event processing and PostgreSQL for incident records, status and diagnostic history.
- **Deployment and remediation scope:** containerized services, Kubernetes/Helm configurations, scripted health checks, controlled recovery workflows, and operational runbooks.

TECHNICAL SKILLS

Operations & diagnostics: Production defect triage, log analysis, root-cause investigation, performance profiling, service lifecycle debugging

Automation & delivery: Gradle plugin development, Git, GitHub Actions, CI/CD, release workflows, Jira, Confluence

Programming & services: Kotlin, Java, JavaScript/TypeScript, Node.js, Ktor, REST, WebSockets, Retrofit, OkHttp, GraphQL

Data & cloud integrations: SQL, SQLite, Room, Firebase, Supabase Edge Functions

PROFESSIONAL EXPERIENCE

VANTAGE CIRCLE — Senior Android Developer | Jul 2020 – May 2026

- Diagnosed production defects, performance regressions and platform compatibility issues across shipped applications.
- Used Android Profiler to investigate rendering and execution bottlenecks; improved location signal processing using Kalman filtering.
- Modernized 60%+ of legacy MVP code to MVVM and migrated 25+ screens to Jetpack Compose to improve maintainability.
- Integrated and debugged REST/GraphQL communication, asynchronous data flows, Firebase services and local SQL persistence.
- Supported releases, Git reviews, Jira-based issue tracking, cross-team troubleshooting and technical documentation.

GEEKWORKX TECHNOLOGIES — Mobile & Web Developer | Jun 2018 – Jun 2020

- Developed and supported Android and web-connected applications; investigated REST API integration failures and resolved defects.

KBG SOFTWARE — Android Developer | Apr 2018 – Jun 2018

- Maintained Android applications, fixed defects and integrated backend APIs.

ADDITIONAL SELECTED PROJECTS

SonicBridge: Built a low-latency TV-to-phone audio streaming pipeline using Ktor WebSockets, foreground services, AudioTrack and bounded packet queues.

ArchGuard: Created a Gradle plugin for automated architectural rule enforcement and repeatable codebase checks.

Digital Me: Built and deployed a portfolio assistant integrating Supabase Edge Functions and retrieval-based API workflows.
