

Nizamuddin Ali Ahmed

Senior Android Engineer | Kotlin | Gradle Plugin Developer | Android SDK Developer | Architecture & Modularization

7002601418 | sallyinfo365@gmail.com | [Linkedin](#) | [Github](#) | [Medium](#)

SUMMARY

Senior Android Engineer with 6+ years of building high-impact mobile products, developer platforms, and reusable engineering solutions. Specializes in Kotlin, Jetpack Compose, modular architecture, performance optimization, and system design. Known for modernizing legacy codebases, simplifying complex architectures, and delivering scalable solutions while mentoring engineers and driving technical excellence across teams. A builder drawn to impossible engineering problems—from AI-powered applications and biometric SDKs to real-time audio streaming platforms, open-source Gradle tooling, and market intelligence systems. Specializes in turning complex ideas into fast, scalable, and maintainable software while bringing architectural clarity, automation, and end-to-end ownership to every mission.

SKILLS

Mobile Development: Android, Gradle, Kotlin, Java, Jetpack Compose, Jetpack Components (Room, LiveData,

ViewModel, Navigation, WorkManager, StateFlow), Retrofit, Coroutines, Dagger, Hilt

Architecture & Engineering: MVVM, MVI, Clean Architecture, Modularization, Data Structures & Algorithms, Unit Testing, Git

Cloud & Backend Platforms: AWS S3, Firebase (Realtime Database, Firestore, Cloud Functions), Supabase, Google Cloud Platform, Ktor

DevOps & Tools: GitHub Actions, Gradle, cPanel, MockK, RxJava, Android 15 upgrade awareness

Other Strengths: Mentoring, system redesign, cross-team collaboration, UI/UX refinement

EXPERIENCE

VANTAGE CIRCLE – Senior Android Developer

Guwahati, India | 07/2020 – 08/05/2026

- **Architected and executed** the migration of 60%+ legacy MVP codebase to MVVM, slashing new developer onboarding time by 40% and future-proofing the platform for scalable modules.
- **Transformed 25+ legacy** UI screens into **Jetpack Compose** masterpieces, accelerating development speed by 30% while boosting first-frame render performance by 35%.
- **Instigated Material3 design system** adoption, ensuring pixel-perfect, consistent UI/UX across multiple app modules.
- **Orchestrated team adoption of cutting-edge design components**, mentoring developers on Jetpack Compose, modular architecture, and best practices — turning junior devs into confident implementers.
- **Directed modularization of key features** (Classified & MyVouchers), enabling independent module development, faster iteration, and seamless collaboration between multiple developers. ● **Enhanced location tracking and step detection with Kalman Filter**, improving accuracy by 25%, while integrating ML Kit Pose Detection for real-time workout feedback, driving 20% higher user engagement.
- Migrated the database from SQLite to **Room**, optimizing data management, queries, and consistency across modules.

- Resolved critical **UI thread bottlenecks using Android Profiler**, slashing frame drops by 40% and delivering buttery-smooth user experiences.
- **Owned technical decisions under high-pressure timelines**, balancing Perks module priorities while experimenting with new design components to ensure zero roadblocks for the team.

GEEKWORKX TECHNOLOGIES – Web and App Developer

Guwahati, India | 06/2018 – 06/2020

- **Designed and developed mission-critical location-based applications** (Wify Cab, Ind Cab) and a **web-based ERP system**, ensuring high performance under real-world operational load.
- **Implemented rigorous testing and debugging workflows**, proactively preventing crashes and ensuring smooth user experience.
- **Mentored and guided junior developers and interns**, introducing scalable coding practices, API integration strategies, and test-driven development.
- Collaborated cross-functionally with backend and QA teams to **optimize app performance and reliability**, establishing standards for future projects.

KBG SOFTWARE – Android Developer

Guwahati, India | 04/2018 – 06/2018

- **Maintained and enhanced educational applications**, improving stability and feature set for school clients.
- **Collaborated on building robust RESTful APIs** and ensured seamless integration with Android clients, improving data reliability and performance.
- Gained hands-on experience in **full-stack mobile development**, including debugging, feature implementation, and client-side optimization.

PERSONAL PROJECTS

ArchGuard – 2026

- Designed and developed **ArchGuard**, an open-source Gradle plugin that transforms architectural guidelines into executable build rules.
- Built a declarative Gradle DSL enabling teams to define feature-first architecture, required layers, nested feature structures, and forbidden folders.
- Implemented architecture validation, HTML reporting, and configurable rule enforcement to help teams maintain consistent project structures.
- Published through JitPack for seamless integration into Android projects.

GitHub: <https://github.com/NonCoderF/ArchGuard>

SonicBridge Mobile App & TV App – 2026

A real-time Android audio streaming platform designed to eliminate the complexity of wireless audio sharing. Leveraging Kotlin, Jetpack Compose, and feature-first architecture, it delivers low-latency streaming, automatic device discovery, and reliable network communication through a scalable, modular design.

GitHub:

Mobile App : <https://github.com/NonCoderF/Sonic-Bridge>

TV App : <https://github.com/NonCoderF/Wifi-Sound-Transmitter-TV-App>

Tapori AI - 2025

- Developed **Mumbai-style Tapori Chatbot** powered by **OpenAI 3.5 Turbo**, delivering a fun, interactive, and context-aware conversational experience.
- Architected the app for scalability and modular AI integration, enabling rapid updates with evolving language models.

Link : <https://play.google.com/store/apps/details?id=com.sparkstudios.tapori.ai.chatbot>

Biometric SDK - 2025

- Designed and implemented a **modular biometric authentication library** for Android, supporting fingerprint and face recognition.
- Enabled plug-and-play integration for multiple apps, ensuring **secure, reusable authentication modules**.

Link : <https://github.com/NonCoderF/biometric-sdk>

Orhan project - 2020 - present

- Built a **real-time stock market analysis tool** with a **single-dashboard eagle-eye view** of market trends.
- Introduced **intuitive symbols** (▲ uptrend, ► consolidation, ▼ downtrend; ↑ / ↓ projections) to simplify decision-making across multiple timeframes.
- Optimized for actionable insights **without needing multiple monitors**, providing traders with instant, data-driven decisions.

Link : <https://github.com/NonCoderF/orhanproject>

Sally Launcher - 2017

- Developed a **custom Android launcher** with integrated **gallery, music player, and video player**, delivering a seamless media experience on mobile.
- Focused on **performance optimization, smooth animations, and modular design** for easy feature extension.

FUN MEDIUM ARTICLES

Subtitle Algorithm – 2024

- Broke down the logic behind building a **subtitle alignment algorithm**, demonstrating text processing, sequence mapping, and real-world media engineering.
- 📄 Read: <https://medium.com/@sallyinfo365/subtitle-algorithm-3ac9ca8b1afa>

How to Implement In-App Updates – 2024

- Published a step-by-step guide on integrating **Play Core In-App Updates**, simplifying a commonly misunderstood workflow for the Android community.
- 📄 Read: <https://medium.com/@sallyinfo365/how-to-implement-in-app-updates-in-android-using-the-play-core-library-965d3b4de81a>

Building a Plug-and-Play Biometric System – 2025

- Documented the architecture behind your **Modular Biometric SDK**, helping developers understand secure authentication and reusable biometric components.
-  Read: [https://medium.com/@sallyinfo365/building-a-plug-and-play-biometric-authentication-eco system-in-android-928abf47c042](https://medium.com/@sallyinfo365/building-a-plug-and-play-biometric-authentication-eco-system-in-android-928abf47c042)

Pyaar Ka Algorithm – 2025

- A fun, creative take on turning **Bollywood romance into Kotlin logic**, blending storytelling with code in true “engineering meets entertainment” style.
-  Read: <https://medium.com/@sallyinfo365/pyaar-ka-algorithm-kotlin-edition-turning-bollywood-romance-into-code-without-losing-the-fee5ed179a61>

EDUCATION

Bachelor of Engineering in Mechanical Engineering

Royal school of engineering and technology

2013 - 2017

- Projects: Four legged robot, Virtual stress analysis in a bicycle frame.

MY STORY SO FAR

Driven by curiosity, I left Mechanical Engineering behind to teach myself Java, Data Structures, Algorithms, and Kotlin. What began as a journey into Android development became a mission to build far more than mobile apps—creating SDKs, Gradle plugins, developer tools, and scalable platforms. I seek out the engineering challenges that others postpone, turning complexity into elegant systems and manual work into automation. Every project is a new mission: solve the unsolved, build what doesn't exist yet, and leave behind software that's faster, cleaner, and stronger than before.
